

Eskisehir Study Site - Turkey

Results from stakeholder workshop 1 (WP3.1):

Currently applied strategies

- Crop rotation
- Fodder crops production
- Tree planting

Potential strategies

- Terracing
- Mulching
- Improving grassland
- Tillage perpendicular to slope
- Check dam
- Vegetation strips
- Drip Irrigation

Overall strategy

- To increase soil fertility
(Crop rotation, mulching, tree planting)
- To limit water loss
(Drip irrigation, improving grassland)
- To prevent water and soil loss by erosion
(Terrace, check dam)

Main conclusion:

Strengths:

- High motivation of local stakeholders
- Good collaboration of external stakeholders
- High level awareness of local stakeholders

Weaknesses:

- Financial aids
- Loose contact between local stakeholders and external stakeholders
- Gender problem
